

## MULTI-BOX – the folding IBC that makes accountants smile

The traditional folding bag-in-box metre cube container is a popular storage medium for both liquid and dry goods. Unfortunately, the cost of purchase has been a major consideration for many companies, particularly those currently renting but wanting to own their own Pool. This has now changed with the introduction into Australia of the Multi-Box cubic container. Developed using knowledge gained from many years of manufacturing this type of container, the Multi-Box combines the best of design with the advantages of low cost sourcing. The Multi-Box is available as a liquid bag-in-box or as a dry goods container that can be tipped.

What you get in a Multi-Box:

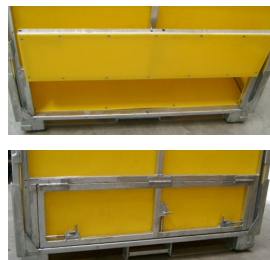

- Fully hot dip galvanised frame for longevity. Subject to the environment in which it is used and routine maintenance, the life span of a Multi-Box can be expected to be in excess of ten years.
- 5mm HDPE food grade UV protected plastic side walls and floor, thicker than any comparable container on the market, reduces warping in heat placing less stress on fastenings.
- Two piece metal lockable galvanised lids are fixed to the side gates. No more potential OH&S nightmares as employees lift 20kg single piece lids. No more separate pieces to be lost in transit.
- An “Easy Lift” handle on front and rear gates takes the strain out of erecting the container and reduces the opportunity for back injury - another OH&S advantage.
- The standard liquid Multi-box has a full length sight glass to monitor the level of contents and a full width drop down gate to allow for easy access to the lockable discharge outlet. The discharge outlet is low enough to assist with fully emptying the container, yet high enough off the floor to allow for use with a heater pad or discharge wand / spear.
- The dry Multi-box has a discharge ‘hopper’ gate at the bottom of one side similar to that used within industry. It also has a larger capacity of 1.2m<sup>3</sup> compared to the liquid unit.

One advantage of the Multi-box is that it can be specifically configured to a customer’s needs if the Pool requirement is as little as one 40’ shipping container quantity (120 units). This includes closely matching plastic panel colour to corporate branding, adding identification plates or markings, as well as changing gate orientation and features. It can also include a change from the standard footprint to a 1200 x 1000mm footprint.

The Multi-Box is tested to International Safe Transit Association (ISTA) Standards and is manufactured in an ISO9001 accredited facility by a major world leader in the manufacture of intermediate bulk containers and cubic containers. It all adds up to excellent value at a very competitive price.

Liquid Multibox showing full length sight glass

Dry option has small discharge gate

Lids are attached to the sides – means no loose pieces.

### Product Specification

External liquid	1165mm x 1165mm x 1085(h)mm
Internal liquid	1088mm x 1088mm x 928(h)mm
External dry	1165mm x 1165mm x 1165(h)mm
Internal dry	1088mm x 1088mm x 1010(h)mm
Folded both	1165mm x 1165mm x 375(h)mm

*Also available in European ISO footprint*

The following figures depend upon final configuration and reflect only the standard products.

Tare Weight	147kg
Max. payload	1500kg
Max. volume	1100 litres (liquid Multi-Box) 1.2m <sup>3</sup> (dry goods Multi-Box)
Stack Height Transit	2
Stack Height Storage	5

*Containers are tested to the internationally recognised ISTA Standard 7C – Reusable intermediate bulk containers.*
