

## Bag-in-Box Bulk Liquid Storage

### FRUIT TOPPINGS, PUREES AND OTHER LIQUIDS

Manufactured under our patented technology, SpaceKraft® is continuously wound from six to ten plies of corrugated, resulting in a seamless container of extraordinary strength (as much as 37 tons of compression strength) for stacking up to six high for solids and four high for liquids. Carrying as much as 330 gallons of product, it is an ideal replacement for drums or metal totes. Unlike metal drums, it doesn't waste space and is easily disposable; and, unlike metal totes, there aren't any exorbitant shipping and maintenance costs.

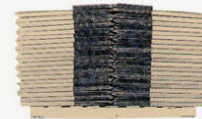

The SpaceKraft® system includes an outer corrugated sleeve; inner multi-ply film liner in a corrugated cassette; cap; and PE shroud.

The liner comes in an easy-to-use cassette and is available in FDA, USDA or Kosher food grades.

We also offer coextruded liners for specific barrier needs, including aseptic.

#### EMPTY STORAGE SAVINGS.

Delivered flat, empty SpaceKraft® IBCs store in 80% less space than empty drums.

#### EASY SETUP AND FILLING

To set it up for filling, position the outer corrugated sleeve on a sturdy pallet, align the drain fitting with a hole in the outer box and square off the sleeve on the pallet. Attach a quick disconnect fitting to the inner film bag, along with the filling hose, and place the bag cassette on the bottom. Just open a valve to fill.

As the bag fills, it rises to the top. It is then capped closed.

#### FASTER PRODUCTION

Because one SpaceKraft® IBC holds as much as 4 to 6 drums, there's only one container to haul to the production line for filling or emptying.

#### CUSTOMER BENEFITS

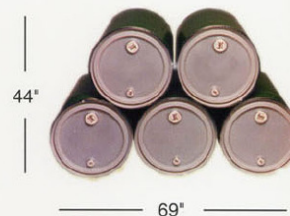

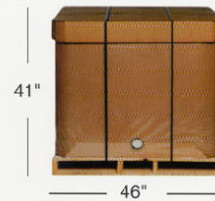

Your customers will appreciate this "mini bulk handling system."

With only one container to handle versus five or six, they can avoid continuously stopping and starting during production. And when the container is empty, all they have to do is bundle it up for recycling!

Customers can empty by draining from the side or pumping from the top.

#### FILLED STORAGE SAVINGS.

One filled SpaceKraft® IBC can be stored in 20% less space than drums needed to hold an equivalent amount of product. What's more, **these IBCs can be stacked up to four high.**
